DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 23, 25 and 26 are rejected under 35 U.S.C. 102(b) as being anticipated by U.S. 4,406,440 to **Kulle et al.**

The patent to **Kulle et al.** discloses a metering device comprising a metering element that is translationally rotatable, operationally attached for engaging most of the length of a compressible material line (56), and upon sliding or rotation causes a peristaltic effect upon a material located within the compressible material line further causing a precision dispensing of a unit of material from the device, as recited in claim 23. The device comprises a base (52) and the compressible material line is positioned between the base and the metering element (50). The flow rate is regulated by appropriately positioning the metering element, thereby making it selectable.
